# T10 Window Screens

(K1 without flange)

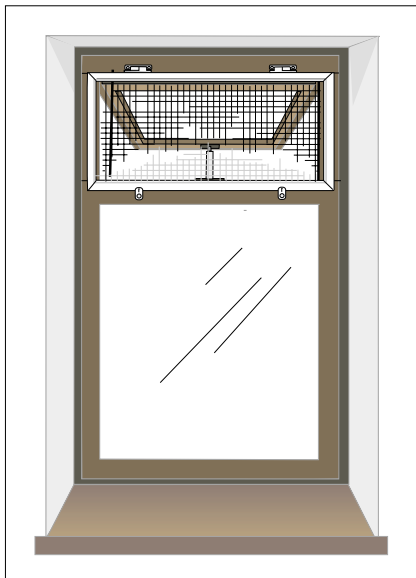

[www.flydor.co.uk](http://www.flydor.co.uk)

**The T10 system** is our most lightweight rigid window screen, designed for relatively small lightweight applications. (<1m squared)

**Versatile** - It can be used as a fixed screen, a hinged (at side or top) screen, or secured with offset turnbuttons only. Economical and lightweight, it is available in component or fully manufactured form.

Left: Typical application - a **T10** hinged screen fitted to top opener

**Materials** - Profiles are a robust extruded aluminium, with PVC coated fibreglass mesh as standard. Aluminium alloy 6063 ST Al Hg SiO(V) 722, extruded to DIN 1748/4.

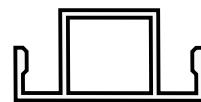

**Assembly** - Mitre corners need to be accurately cut for push fit corners, but essentially only basic tools and skills are required to assemble the T10 system.

## Colours

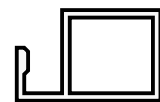

**Profile is available in the following colours.**  
As with all components, in place of .x, specify:

- White (standard) .1 (PPG code 770)
- Dark Brown .2 (PPG code 610)
- Aluminium .3 Mill Finish .4 (PPG code refers to powder coating colour)

## Profile shown actual size

**Mid bar 1002.x**

**Profile 1010.x**
